

3Shape Indirect Bonding Studio

Go for digital precision

3Shape Indirect Bonding Studio allows you to place brackets virtually with high precision – and provides you with a real-time post-treatment outcome prediction. The bonding tray can be designed and printed in minutes, allowing you to optimize your workflow. Placing brackets, using a bonding tray, increases patient comfort and frees up chair time.

Benefits for orthodontists

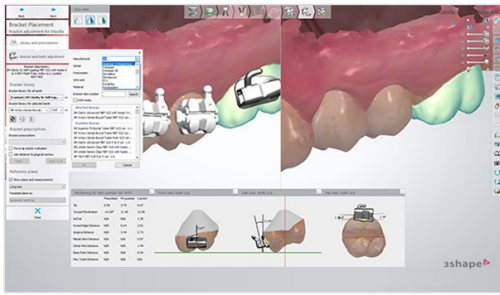

- Enjoy digital precision
- Be supported by real-time outcome prediction
- Guided workflows
- Get access to the largest selection of original bracket libraries

Benefits for patients

- Increased patient comfort
- Envision projected outcome of treatment
- See actual teeth in realistic colours
- Start treatment same day

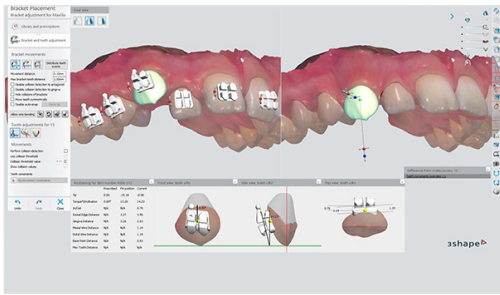

Let's change dentistry together

3shape 

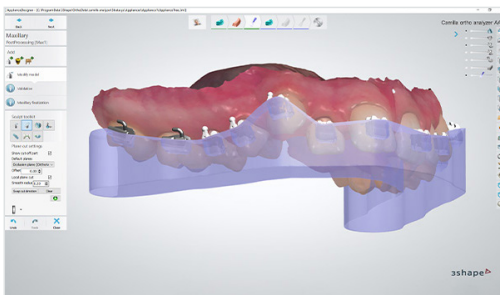

Original libraries integrated

Choose your preferred bracket libraries from 650 original integrated libraries from more than 30 vendors. Original bracket libraries are integrated in the software to support precision.

Guided workflow based on your preferences

Create and save your ideal setup – the software guides you through the rest, based on your preferences. Adjustments are simple, as the software automatically makes the corresponding changes in the bracket placement.

Print bonding trays in-house

Print bonding trays directly with your own 3D printer or send it to your preferred lab if you don't have your own production facilities.

The integration

The Indirect Bonding Studio digital workflow is made possible by the 3Shape TRIOS® intraoral scanner and offers seamless integration with a wide range of 3D printers.

It's easy to get started doing digital indirect bonding with a TRIOS in your practice.

Please contact your reseller regarding availability of 3Shape products in your region.
